Bengaluru Restaurants Zomato Dataset

Prajval P

The dataset is collected from Kaggle a subsidiary of Google LLC, is an online community of data scientists and machine learning practitioners.

The link to the dataset is:

<https://www.kaggle.com/himanshupoddar/zomato-bangalore-restaurants#>

The dataset is robustly distributed and has data of over 50,000 restaurants located in the city of Bangalore. It has 17 columns : URL, address, name, availability of online order, availability of reservation, ratings based on the review, number of votes for the restaurant, phone number, location and the restaurant type.

The above mentioned columns would help in try to analyse the food culture, dishes and the new cuisines, and also find what the restaurants are doing to help improve their ratings and online reviews, how the current performance of the restaurants, their location and demographics would effect a new restaurant in the area.
